

SUBJECT INDEX

BIODIVERSITY & SUSTAINABLE DEVELOPMENT: PAKISTANI PERSPECTIVE

Introduction: *Food Supplies; Plants; Importance of Plants as a Genetic Resource; Plants as Source of Medicines; Environmental Services; Aesthetic Value of Biodiversity; Ethical Value of Biodiversity; Status of Biodiversity in Pakistan; Flora; Biodiversity and Sustainable Development; Ecological Integrity; Intensive Farming; Sustainability of Both Biodiversity and the Community; Social and Cultural Aspects; Research, Public Education and Awareness*, **158**; Recommendations, **158**; References, **159**.

BIOTECHNOLOGY FOR SUSTAINABLE DEVELOPMENT

Background, **161**; Benefits of Biotechnology: *Protecting Water Quality; Reducing Chemical Pesticides; Weed Management; Environmental Benefits; Biomass Energy; Producing Healthier Foods; Promising Hope in Developing Countries; Health and Medical Care*, **164**; Biotechnology and Sustainable Development: *Can Biotechnology Help in Achieving Millennium Development Goals; Addressing the WEHAB Topics; Facilitating Sustainable Development Through Biotechnology*; **174**; Recommendations, **178**; Conclusions, **180**; References, **181**.

EDUCATION FOR SUSTAINABLE DEVELOPMENT

Introduction, **49**; History of Education for Sustainable Development: *Decade on Education for Sustainable Development; WEHAB and ESD; Education: Promise and Paradox*, **54**; Thresholds of Education and Sustainability, **55**; Education Directly Affects Sustainability-Plans in the following three Areas: *Implementation; Decision Making; Quality of life*, **57**; Strategic Path to Education for Sustainable Development: *Improving Basic Education*, **57**; Re-Orienting Existing Education: *Public Understanding and Awareness; Training*, **59**; Localizing the Global Initiative: *Strengths Model*, **61**; ESD, An Evolving Concept: *Higher Education and Sustainable Development; Sensitizing People to the Importance of ESD*, **64**; Some Typical Cases: *Japanese Educational Achievements; Korean Education*, **66**; Conclusions, **66**; References, **67**.

FROM RIO TO JOHANNESBURG: ACHIEVEMENTS AND FAILURES IN SUSTAINABLE DEVELOPMENT

Moving from Development to Sustainable Development, **1**; The Downside, **2**; The United Nations Conferences on the Human Environmental (Sweden 1972), **3**; The Brandt-Report [1980], **4**; The Brundtland Report (1987), **4**; The UN Conference on Environmental and Development [Rio de Janeiro 1992], **9**; Achievements and Failures in Sustainable Development: Post-Rio Analysis: *Failures*, **14**; Achievements: *Emergence of well-informed Civil Society; Ozone-Layer Restoration; The Kyoto Protocol; Science and Technology Framework; 'Environment' on the National Agenda; Local Initiatives: Local Actions Global Thinking; Corporate Social Responsibility (CSR); Post-Rio Agreements on Chemical and Biological Risk; Information for Decision Making*, **24**;

Final Remarks, **25**; Bibliography, **26**.

IMPORTANT ASPECTS OF SUSTAINABLE DEVELOPMENT BASED ON SCIENCE AND TECHNOLOGY

Introduction, **27**; Sustainable Development and Science and Technology: *The Knowledge Divide; Science and Technology and Economic Development; Challenges of Sustainable Development and the Potential Areas of Contribution by Science and Technology*, **30**; Water: *Water Consumption, Water and Current Issues; Water and the Future*, **32**; Energy: *Energy Consumption; Energy and the Environment; Energy for the Future and the Future of Energy; Motivating Research and Development and Deployment of Renewable-Energy Technologies; Thoughts on Finances for New Research and Deployment of Clean Technologies*, **35**; Health and Current Issues: *Health; Health and the Future*, **37**; Science and Technology for Agriculture and Biodiversity, **37**; Thoughts on Genetic Modification and Scientific Responsibility: *Biodiversity; Some Relevant Information on UN Convention on Biodiversity; Thoughts on the Uneasy Relation between Agriculture and Biodiversity*, **41**; Food Security: *Food Security and the Environment; Food Security and Current Issues; Food Security and the Future*, **42**; Mainstreaming Science and Technology for Sustainable Development: *International Cooperation Amongst Nations; International Networking Networking Amongst Scientific Organizations*, **43**; Final Thoughts, **46**; References, **47**.

INFORMATION COMMUNICATION TECHNOLOGIES AND THE MILLENNIUM DEVELOPMENT GOALS

Introduction, **125**; Defining Sustainable Development, **126**; ICTs Relation to Sustainable Development, **127**; Millennium Development Goals (MDGs): *Education, ICTs and Millennium Goals, ICTs Provide Educational Opportunities, Involvement of Education and Application of ICTs in Achieving MDGs*, **137**; ICTs in Healthcare: *Tele-Health; Potential of ICTs in Healthcare to Positively Impact Healthcare; Benefitting from Tele-Health; Maximizing Utilization of Tele-Health to Meet MDGs; Difficulties in Setting up Tele-Health in Developing Countries; Recommendations for Promoting Tele-Health in Developing Countries*, **144**; Concluding Remarks, **145**; References & Bibliography, **147**.

NUCLEAR POWER AND SUSTAINABLE DEVELOPMENT

Introduction, **69**; Sustainable Development: *Internationalisation of Sustainable Development; Some Important World-Initiatives; Significance of the World Summit on Sustainable Development, Johannesburg-2002; Energy, Sustainable Development and the Johannesburg Declaration; Johannesburg's Poverty Reduction Targets and Unclean Energy; Help from Nanotechnology to Solve World Energy-Problems*, **82**; The Case of Nuclear Power: *Role of Nuclear Power in Sustainable Development; Advantage of Nuclear Power; Nuclear Power-Current Status*, **88**; The Future and Innovation: *Advanced Fission and Fusion; Innovation*, **92**; Conclusions, **99**; References and Future Reading, **100**.

RENEWABLE ENERGY FOR SUSTAINABLE DEVELOPMENT

Energy for Sustainable Development: *The Environmental Concerns and Energy; Global Issues and Challenges for Sustainability; Energy Policies for Sustainable Development*, **112**; Renewable Energy for Sustainable Development: *Present Status of Renewable Energy Use; The Basic Problem*, **118**; Renewable Energy Options: *The Present Situation; The Basic for Prediction and Planning; Renewable Energy Perspective (2010 and 2015)*, **122**; Bibliography, **124**.

ROLE & IMPORTANCE OF REGIONAL COOPERATION IN SCIENCE & TECHNOLOGY

Introduction, **183**; Need for S&T Cooperation: *A Common will and desire for cooperation; Cooperation at the Institutional level; Development of policies promoting cooperation; Regular Communication, Academic Exchange, and Extensive Database*, **186**; Challenges in the way of Regional Cooperation: *Inconsistency of Policies by Governments; Brain-Drain; Lack of Communication Facilities; Regional and Intraregional Conflicts; Leading Misconceptions about Science & Technology*, **188**; Benefits and Feasibility of S&T Cooperation, **188**; Prospects and Opportunities in S&T Cooperation: *Increased Investment in Research & Development; Challenging Trends in International Policies; Inter-Regional/multi-Regional Developments; The Role of ICTs for Cooperation*, **190**; Strategies for Future Directions and Cooperation: *Policy of Science and Technology; Human Resource Development; Strengthening Institutional Capacities; Identifying Clusters of Common Interests*, **192**; Conclusions, **192**; References, **193**.

SCIENCE & TECHNOLOGY POLICY, A SUGGESTIVE ROADMAP FOR DEVELOPING COUNTRIES

Centrality of Science and Technology to Sustainable Development, **195**; Need of S&T Policy, **196**; Objectives of S&T Policy, **196**; Strategy & Implementation Plan: *Scientific and Technology Governance and Investments; Optimizing Existing Infrastructure and Competence; Building Capacity; Strengthening Infrastructures for S&T in Academic Institutions; Sound Funding-Mechanism for Basic and Advanced Research; Developing Human Resources; Decelerating Brain Drain; Transferring, Developing and Diffusing Technology; Promoting Innovation; Research and Development; Indigenous Resources and Traditional Knowledge; mitigating and Managing Natural Hazards through Technologies; Bringing Sustainability to Environment; Generating and Managing Intellectual Property Rights; Generating Public Awareness and Interest; Building International Cooperation for Science and Technology; Measuring Fiscal Performances; Monitoring; Thrust Areas of Science & Technology; Strengthening Public-Private Partnerships; The New Vision*, **218**; Conclusions, **218**; References, **218**.
